Experience

Chief Technology Officer, Simpeo

Birmingham, AL (Remote) // May 2018 - January 2019

Managed personnel and collaborated with C-level to develop company-wide product roadmap and overall technology vision. Researched and implemented new technologies to optimize internal operations and deliver a better external user experience. Drove innovation in product management, development, and daily operations of core product and internal pricing calculator. Developed company website as a PWA to increase SEO visibility and sales potential. Built a well-documented, tested, and fully accessible internal design system and component library. Orchestrated the completion of multiple projects with strict deadlines, delivered on-time and within budget. Technologies used: Gatsby, React, GraphQL, React Native, Go, Node, Terraform, AWS.

Web Developer, Envy Labs

Orlando, FL // June 2017 - April 2018

Committed to product exploration and preliminary research with new clients, executed new feature developments, and resolved code errors and failures. Focused on creating a feature development for a learning platform product for Cisco Systems, Inc. Built internal client dashboard to handle billing, project communication, and project analysis. Technologies used: Ember, Ruby on Rails, React, GraphQL, Chef, AWS.

Web Developer (Contract), Luckie & Company

Birmingham, AL // August 2016 - May 2017

Tasked with developing new solutions for automated deployments, creating developer environment on-boarding, starting projects, and integrating third party services for a more cohesive and enjoyable developer experience. Technologies used: Vue, Node, Ember, React, Wordpress, Hugo, Go, IIS, Jenkins.

Senior Web Applications Developer, Viva Health, Inc.

Birmingham, AL // May 2013 - August 2016

Served as the primary technical resource for design and development of internal and external applications. Responsible for gathering requirements, needs analysis, design, prototypes, walkthroughs, and wireframes. Appointed for overall look, feel, and UX of robust enterprise-ready healthcare applications using JavaScript frameworks, web services, and other backend technologies. Technologies used: Meteor, MongoDB, React, MySQL, Java.
